Excel is a popular and powerful spreadsheet application for Windows. The openpyxl module allows your Python programs to read and modify Excel spreadsheet files. For example, you might have the boring task of copying certain data from one spreadsheet and pasting it into another one.

### **Automate the Boring Stuff with Python**

Python 3 is the latest version of the Python programming language and was formally released on December 3rd, 2008. Use the more generic [python] tag if your question is not version-specific.

### **Newest 'python-3.x' Questions - Stack Overflow**

Introduction. I have written several times about the usefulness of pandas as a data manipulation/wrangling tool and how it can be used to efficiently move data to and from Excel. There are cases, however, where you need an interactive environment for data analysis and trying to pull that together in pure python, in a user-friendly manner would be difficult.

### **Interactive Data Analysis with Python and Excel**

How do I open a file that is an Excel file for reading in Python? I've opened text files, for example, sometextfile.txt with the reading command. How do I do that for an Excel file?

### **How can I open an Excel file in Python? - Stack Overflow**

To understand how to get data from another Excel file, lets assume these 2 workbook names. Source: In this workbook, VBA code will be executed to write or import data from/to Target file.; Target: This workbook has the data that the Source Workbook will read or modify through VBA.; 1. VBA To Update Closed Workbook. This Excel vba import data from another workbook without opening the file manually.
